- Saharnaz Nedjat, Professor, Department of Epidemiology and Biostatistics, School of Public Health, Tehran University of Medical Sciences, Tehran, Iran
- John Norcini, PhD, President and Chief Executive Officer of Foundation for Advancement of International Medical Education and Research (FAIMER), Philadelphia, Pennsylvania, USA.

Review activity

- We performed the electronic search in seven bibliographic databases, as they had been included in the protocol. The search strategy for each database was documented.
- In order to find the grey literature, we searched ProQuest Dissertations & Theses and OpenGrey.
- The obtained papers were recorded in Endnote, separately for each database.
- The duplicates were deleted and the remaining papers underwent for the screening process.
- We decided to use Rayyan software for screening.
- Two authors (MJ and RM) screened the title and abstracts, according to the inclusion/exclusion criteria stated in the protocol.
- The full texts of the remaining papers were found and recorded in Endnote.
- Again two authors (MJ and RM) screened the full texts to identify eligible papers.
- We are going to conduct forward and backward searching by checking the reference lists and citations of the included articles for additional relevant studies.
- The next step will be extraction of data from the included papers.
- The project is running nearly on time.
